On the way home the donkey stumbled as he was crossing a stream and fell into the water. The salt got wet and much of it melted and drained away, so that, when he got on his legs again, the donkey found his load had become lighter than before.

His master, however, drove him back to town and bought more salt, which he added to what remained in the panniers, and started out again. No sooner had they reached a stream than the donkey again put himself in the water and came out with a much lighter load.

But the seller detected his trick, and turning back once more, bought a large number of sponges, and piled them on the back of the donkey.
